- Share images, video, web pages with one simple device
- Centrally manage your content and distribution with an easy-to-use interface
- Use digital content to communicate with your audience

EASY TO USE:

Visualz is a cloud based digital signage service that turns any display into a digital signage display, without the need for hours of training. Simply plug the Digital Media Agent (DMA) into any HDMI connector and begin uploading and scheduling content.

CENTRALLY MANAGED:

Whether you have one display or hundreds, content can be centrally managed by utilizing the Visualz user friendly web-based portal. Turn content on or off with a simple click of a mouse. Pick and choose which DMA displays your content and for what length of time.

EMERGENCY OVERRIDE:

Seamlessly display emergency messaging within seconds by using the Visualz Management Portal, smart device[,] or Apple Watch. The override disrupts whatever content is currently being displayed with the emergency content. When the emergency is over, stop the override and your regularly scheduled content will begin playing automatically.

MULTI-TIER:

The portal enables you to designate a third party to manage your digital signage deployment. It's transparent and can be changed at any time. So whether you need assistance managing your content or creating the content from scratch, Visualz makes it easy and afforable for you to team up with a third party for assistance.
